Project Title:

Aetiology, Pathogenesis and
Prevention of Hepatocellular Carcinoma in
Black Africans

Researcher:

Michael Kew (Ph.D.)

Country:

South Africa

University:

Witwatersrand-Johannesburg

عنوان طرح:

شناسایی و جلوگیری سرطان کبد در سیاهان آفریقا

محقق:

دکتر میکائیل کیو

کشور:

آفریقای جنوبی

دانشگاه:

ویت واترزند-ژوهانسبورگ

Abstract:

Dr. Kew has devoted the past 32 years to researching hepatocellular carcinoma, one of the major malignant diseases in the world today and either the most common cancer or among the three most common cancers in many of the most populous regions of the world, including sub-Saharan Africa.

In so doing, he has made significant contributions to our understanding of the aetiology and pathogenesis, clinical presentation, diagnosis, and pathobiology of this tumour, as well its epidemiology and that of its risk factors, not only in Africa but throughout the world. His research findings have contributed in large part to persuading the South African government to introduce measures directed at preventing this common and devastating tumour.

He has written 222 articles in peer-reviewed medical and scientific journals, 212 conference paper and 50 chapters in book reporting the results of his research on hepatocellular carcinoma and providing insights into many aspects of the tumour.
